

# Care instructions

## Care and protection of motorcycle gloves

Dear Customer,

Thank you for placing your trust in our product. Please use these instructions for protection of your motorcycle gloves. The Louis Team wishes you lots of fun.

With proper regular care, your motorcycle gloves will give you long and reliable service. Many of you experienced bikers will have come to love your trusty old comfortable, worn-in motorcycle gloves and wouldn't dream of trading them in for just any new pair!

1. Please waterproof your new gloves before wearing them for the first time. This is essential to protect against moisture stains and increase dirt-repellency.
2. After using your gloves, dry them at room temperature. Do not place them on a radiator and do not expose them to strong sunlight. Do not wring out wet gloves or squeeze them too vigorously.
3. Soiled smooth leather should be cleaned with a cloth or sponge. Only use clear water or water with a little washing-up liquid or special leather cleaner. **Do not use harsh solvents like white spirit, cellulose thinners or turpentine!**
4. Rub the leather dry with a towel. Then treat your gloves with a special leather proofer or grease.
5. Napped leathers (suede, nubuck) should not be greased and only rarely wet cleaned. Dirt should preferably be removed with a dry brush; a special brush can be used to raise the nap on shiny spots.
6. For textile gloves with a membrane, always follow the instructions on the care label. As a rule, gloves with a membrane can be washed by hand in cold water using a special detergent. You should avoid soaking them completely, as they are difficult to dry again. Damp or wet gloves which have any leather should never be dried on a radiator, in direct sunlight or similar heat sources, as the leather will become brittle. Never tumble-dry your gloves.
7. Once they are dry, gloves should be treated with a dirt- and water-repellent textile/leather proofer.

You can also have your gloves professionally cleaned at a dry cleaners. **Please always follow the instructions on the sewn-in care label!**

**Care tips:**

One way to ensure that you get the most out of your clothing is by taking good care of it. This summary of the key care icons, found on clothing labels, will help.

**Bleaching**

Any bleach allowed.      Only oxygen bleach. Non-chlorine bleach allowed.      Do not bleach.

**Ironing**

Iron at high setting (level 3)      Iron at medium setting (level 2)      Iron at low setting (level 1)      Do not iron

The dots indicate the iron temperature levels.
